

MVP Readiness Snapshot

AI-Powered Founder Diagnostic for Workshop

Product Logic, AI Rules & Frontend Recommendations

1. Product Concept

The **MVP Readiness Snapshot** is a lightweight AI-powered diagnostic tool for early-stage founders.

Workshop participants will scan a QR code, answer a few guided questions about their startup, and receive a simple AI-generated output showing:

- Their current MVP readiness stage
- Top strengths
- Key assumptions to validate
- Suggested MVP experiment
- Suggested 7-day validation plan

The goal is not to judge startups or predict success. The goal is to help founders think clearly before they overbuild.

Core Philosophy

Build proof before product.

The first product is not the goal. The first proof is the goal.

The tool should help founders answer:

- Are they solving a real problem?
- Do they know the user, payer, influencer, and blocker?
- Is there any evidence that someone will pay, repeat, renew, or refer?
- What is the smallest MVP experiment they can run?
- How will they reach their first 10 users?
- What assumption must they validate next?

2. Product Modes

A. Workshop Mode — Recommended for Live Event

This is the primary version for the Tripura workshop.

Characteristics:

- 5-minute completion
- 6 simple sections
- Friendly tone
- One AI probing question per section
- Simple readiness stage instead of harsh score
- Short output with practical next steps

B. Full Diagnostic Mode — Optional Later

This can be used after the workshop.

Characteristics:

- Full Lean Canvas
- Pitch deck upload
- Detailed score out of 100
- Detailed AI report
- PDF download
- Deeper recommendations

For the workshop, we should only build **Workshop Mode** first.

3. User Experience Principles

The frontend should feel:

- Simple
- Encouraging
- Mobile-first
- Fast
- Non-threatening
- Founder-friendly
- Practical

Avoid making it feel like an exam or investor evaluation.

Avoid words like:

- Failure risk
- Bad score
- Weak idea
- Low probability
- Not ready
- Poor founder

Use words like:

- MVP Readiness
- Clarity
- Assumptions to validate
- Next best action
- Discovery stage
- Pilot readiness
- Areas to sharpen

Important workshop framing:

“This is not a startup judging tool. This is a founder thinking tool.”

4. Recommended Public Name

MVP Readiness Snapshot

Suggested subtitle:

Find your next best MVP move in 5 minutes.

Other name options:

- Founder Proof Snapshot
- Idea-to-MVP Diagnostic
- Startup Readiness Snapshot
- MVP Clarity Check
- Build Proof Before Product

Recommended CTA:

Start My MVP Snapshot

5. Frontend Flow

Screen 1: Welcome / QR Landing Page

Heading

MVP Readiness Snapshot

Subheading

Answer 6 quick questions about your startup and get an AI-generated MVP readiness view with your next 7-day action plan.

Helper Text

This is not an exam. The goal is to help you identify what to validate before building too much.

CTA

Start Snapshot

Visual Recommendation

Use a clean startup canvas visual or a simple 5-step progress graphic.

Screen 2: Founder & Startup Basics

Heading

Tell us about your startup

Fields

1. Founder name
2. Startup name
3. Sector / industry
4. Current stage
5. Team size
6. Product type
7. Business model type

Stage Options

- Idea stage
- Problem discovery
- Prototype ready
- MVP built
- MVP launched with early users
- Paying customers
- Repeat customers / renewals
- Scaling

Product Type Options

- B2C
- B2B
- B2B2C
- Marketplace
- SaaS
- Hardware
- AI product
- Social impact
- Government / public sector

- Other

Frontend Note

Keep this screen short. Use dropdowns wherever possible.

Screen 3: Problem

Heading

What painful problem are you solving?

Main Question

Describe the exact problem your startup is solving.

Prompt Help

Try this format:

For [specific user], [specific problem] causes [specific pain or loss].

Example

For small kirana stores, losing repeat customers to online apps reduces daily sales and weakens their relationship with neighbourhood buyers.

AI Probe Logic

If answer is vague, AI asks:

- Who exactly faces this problem?
- What happens if this problem is not solved?
- How are they solving it today?

Backend Assessment

Evaluate:

- Is the problem specific?
 - Is the pain clear?
 - Is the current alternative understood?
 - Is the problem urgent or frequent?
-

Screen 4: Customer Map

Heading

Who uses, pays, influences, and blocks?

Main Questions

1. Who is the end user?
2. Who pays?
3. Who influences the decision?
4. Who can block adoption?

Prompt Help

In many startups, these are different people. Getting this wrong means you may pitch to the wrong audience.

Example

In Batplus, the player used the product, the parent often paid, the coach influenced adoption, and the academy owner controlled access.

AI Probe Logic

If the founder gives the same answer for everyone, AI asks:

- Are you sure the user and payer are the same?
- Who needs to approve payment?
- Who might resist adoption even if the product is useful?

Backend Assessment

Evaluate:

- User clarity
 - Payer clarity
 - Influencer clarity
 - Blocker clarity
 - Stakeholder incentives
-

Screen 5: Value & Payment

Heading

Will someone pay, repeat, renew, or refer?

Main Questions

1. Why will customers care enough to use this?
2. Who will pay?
3. Have you tested willingness to pay?
4. What will make them come back or renew?

Prompt Help

A first sale may come from curiosity. Repeat usage or renewal shows real value.

Key Line

Acquisition is applause. Renewal is proof.

AI Probe Logic

If payment answer is weak, AI asks:

- Has anyone paid, pre-ordered, committed, or asked for a pilot?
- What value must the customer experience before they pay again?
- Would they still use this if it was not free?

Backend Assessment

Evaluate:

- Value clarity
 - Payer clarity
 - Pricing hypothesis
 - Payment evidence
 - Repeat / renewal logic
-

Screen 6: MVP

Heading

What is the smallest thing you can test?

Main Questions

1. What MVP are you planning to build?
2. What assumption does it test?
3. What can be manual?
4. What can wait?

Prompt Help

MVP is not a mini version of your dream product. MVP is an experiment to test the riskiest assumption.

MVP Type Options

- Landing page MVP
- WhatsApp MVP
- Manual / concierge MVP
- Figma prototype
- No-code MVP
- AI-assisted MVP
- Pilot MVP
- Hardware prototype
- Other

AI Probe Logic

If MVP is too broad, AI asks:

- If you had only 7 days, what would you test?
- Which feature can be removed?
- Can this be tested manually before building tech?
- What will prove this MVP is worth continuing?

Backend Assessment

Evaluate:

- Is MVP small?
 - Is it linked to a risk?
 - Is it measurable?
 - Is founder overbuilding?
 - Is manual validation possible?
-

Screen 7: Distribution

Heading

How will you reach your first 10 users?

Main Questions

1. Who are your first 10 users?
2. How will you reach them?
3. Why will they trust you?
4. What is your first conversion action?

Prompt Help

Do not write “social media marketing” unless you know the exact audience, message, and channel.

Key Line

AI makes building easier. It does not make distribution easier.

AI Probe Logic

If answer is vague, AI asks:

- Can you name 3 specific people or organizations you will approach?
- What will you say to them?
- What objection do you expect?
- Why is this channel better than alternatives?

Backend Assessment

Evaluate:

- First-user specificity
 - Founder-led sales plan
 - Trust-building mechanism
 - Channel clarity
 - Conversion action
-

Screen 8: Proof So Far

Heading

What evidence do you already have?

Main Questions

1. How many real users or customers have you spoken to?
2. Have you shown a prototype, demo, or offer?
3. Has anyone paid, subscribed, repeated, referred, or committed?
4. What surprised you from customer feedback?

Prompt Help

Compliments are not proof. Behaviour is proof.

AI Probe Logic

If evidence is weak, AI asks:

- Did users only praise the idea, or did they take action?
- What is the strongest negative feedback you received?
- Did anyone ask to use it again?
- Did anyone offer to pay or refer?

Backend Assessment

Evaluate:

- Customer conversation evidence
 - Behavioural evidence
 - Payment evidence
 - Repeat evidence
 - Learning from feedback
-

6. Results Screen

Heading

Your MVP Readiness Snapshot

Output Components

1. MVP readiness stage
 2. Clarity score
 3. Top 2 strengths
 4. Top 2 assumptions to validate
 5. Suggested MVP experiment
 6. Suggested 7-day action plan
 7. Improved one-line pitch
 8. Founder reflection question
-

7. Readiness Stages

Instead of showing a harsh “low score,” show founder-friendly readiness stages.

Stage 1: Idea Clarity

Meaning

You are still sharpening the problem and customer.

Message

Before building, focus on customer conversations and problem clarity.

Best Next Step

Talk to 10 target users and understand current alternatives.

Stage 2: Discovery Ready

Meaning

You have a direction, but important assumptions need validation.

Message

You are ready to run structured customer discovery.

Best Next Step

Validate user, payer, pain intensity, and willingness to pay.

Stage 3: MVP Candidate

Meaning

You have enough clarity to test a small MVP.

Message

Build only what is needed to test the riskiest assumption.

Best Next Step

Run a 7-day MVP experiment with first users.

Stage 4: Pilot Ready

Meaning

You have early clarity and can run a controlled pilot.

Message

Focus on usage, feedback, payment, and repeat behaviour.

Best Next Step

Run a pilot with clear success metrics.

Stage 5: Revenue Ready

Meaning

You have signs of payment, repeat use, or adoption.

Message

Focus on retention, renewal, referrals, and repeatable distribution.

Best Next Step

Strengthen GTM, pricing, and renewal loops.

8. Optional Numeric Backend Score

The frontend may show only readiness stage, but backend can calculate score out of 100.

Scoring Dimensions

Dimension	Points
Problem Clarity	15
Customer & Stakeholder Clarity	15
Value & Payment Readiness	20
MVP Experiment Quality	15
Distribution Readiness	15
Validation Evidence	10
Team & Stage Fit	5
Cashflow Awareness	5
Total	100

Readiness Mapping

Score	Frontend Stage
0–25	Idea Clarity
26–45	Discovery Ready
46–65	MVP Candidate
66–80	Pilot Ready

Score	Frontend Stage
81–100	Revenue Ready

Important:

Do not overemphasize numeric score in the live workshop. The stage and recommendations matter more.

9. Backend Scoring Logic

Problem Clarity — 15 Points

Strong answers include:

- Specific user
- Specific pain
- Current alternative
- Urgency or frequency
- Clear consequence if unsolved

Weak answers include:

- “Everyone is customer”
 - Problem framed only as lack of app
 - No pain intensity
 - No current alternative
-

Customer & Stakeholder Clarity — 15 Points

Strong answers include:

- Clear user
- Clear payer
- Clear influencer
- Clear blocker
- Understanding of stakeholder incentives

Weak answers include:

- User and payer confused
 - No decision-maker clarity
 - No blocker awareness
 - Pitching to wrong audience
-

Value & Payment Readiness — 20 Points

Strong answers include:

- Clear value proposition
- Payment or pricing hypothesis
- Evidence of willingness to pay
- Repeat / renewal logic
- Customer outcome is measurable

Weak answers include:

- “We will monetize later”
 - Free users only
 - No payer clarity
 - No renewal thinking
 - Value explained only as features
-

MVP Experiment Quality — 15 Points

Strong answers include:

- MVP tests riskiest assumption
- MVP is small and fast
- Manual/no-code option considered
- Success metric defined
- Feature discipline is visible

Weak answers include:

- Full product described as MVP
 - Too many features
 - No assumption being tested
 - No measurable result
-

Distribution Readiness — 15 Points

Strong answers include:

- First 10 users identified
- Founder-led outreach plan
- Trust-building channel
- Clear conversion action
- Realistic early GTM

Weak answers include:

- Generic “social media”

- No first-user list
 - Outsourcing sales too early
 - No trust mechanism
-

Validation Evidence — 10 Points

Strong answers include:

- Customer interviews
- Prototype shown
- Paid pilot
- Repeat usage
- Referrals
- Negative feedback captured
- Behavioural proof

Weak answers include:

- Only friends/family feedback
 - No real users spoken to
 - Compliments without action
 - No rejection data
-

Team & Stage Fit — 5 Points

Strong answers include:

- Founders own sales and customer discovery
- Relevant domain or execution capability
- Small focused team
- Clear ownership

Weak answers include:

- Hiring before clarity
 - No one owns sales
 - No one owns product/customer discovery
 - More people being added to solve unclear problems
-

Cashflow Awareness — 5 Points

Strong answers include:

- Founder knows burn and runway
- Spend is linked to learning
- Validation before heavy spend

- No premature production or hiring

Weak answers include:

- No runway clarity
 - Heavy spend before proof
 - Fundraising assumed as survival plan
 - Production too early
-

10. AI Probing Rules

For each section, AI should classify the answer as:

- Clear and evidence-backed
- Clear but unvalidated
- Vague
- Too broad
- Feature-heavy
- Missing payer
- Missing distribution
- Overbuilt MVP
- Lacking proof
- Contradictory

Probing Question Rules

- Ask only 1 probing question per section in Workshop Mode
- Ask maximum 2 only if answer is very vague
- Keep question short
- Ask for evidence, not opinion
- Ask for behaviour, not compliments
- Avoid sounding like an investor grilling the founder

Example:

Weak answer: "We are building an app for students."

AI probe: "Which specific type of student are you targeting first, and what painful problem do they face today?"

Weak answer: "We will market on Instagram."

AI probe: "Can you name your first 10 users and how you will personally reach them?"

Weak answer: "Users will pay a subscription."

AI probe: "What evidence do you have that they will pay or renew after the first month?"

11. AI System Prompt

Use this as the core instruction for the AI evaluator.

System Prompt

You are an expert founder coach and early-stage startup diagnostic assistant.

Your job is to help founders think clearly about their MVP readiness. You are not judging the founder, predicting success, or acting as an investor. You are helping them identify what to validate before they overbuild.

Use the philosophy:

- Build proof before product.
- MVP is not a mini product; MVP is an experiment.
- Acquisition is applause. Renewal is proof.
- User, payer, influencer, and blocker may be different.
- Founder-led sales is essential in the early stage.
- AI makes building easier, but not distribution easier.
- Cashflow buys learning time.
- Hidden incentives can block adoption even when the product has value.

Evaluate the startup based on:

1. Problem clarity
2. Customer/stakeholder clarity
3. Value and payment readiness
4. MVP experiment quality
5. Distribution readiness
6. Validation evidence
7. Team/stage fit
8. Cashflow awareness

Keep tone friendly, practical, direct, and encouraging.

Do not use harsh language such as “bad idea,” “low chance of success,” or “failure risk.”

Instead, say:

- “This needs sharper validation.”
- “This assumption needs testing.”
- “Your next best step is...”
- “Before building more, validate...”

Do not claim to predict startup success. Provide only a directional MVP readiness assessment based on the information given.

Always produce:

- MVP readiness stage
 - Short summary
 - Top 2 strengths
 - Top 2 assumptions to validate
 - Suggested MVP experiment
 - 7-day action plan
 - Improved one-line pitch
 - One founder reflection question
-

12. Scoring Prompt Template

Use this after all responses are collected.

Prompt

Assess the following startup using the MVP Readiness Snapshot framework.

Founder details: [INSERT]

Startup details: [INSERT]

Stage: [INSERT]

Team size: [INSERT]

Product type: [INSERT]

Responses: [INSERT ALL RESPONSES]

Optional pitch deck summary: [INSERT IF AVAILABLE]

Evaluate using these dimensions:

1. Problem Clarity — 15
2. Customer & Stakeholder Clarity — 15
3. Value & Payment Readiness — 20
4. MVP Experiment Quality — 15
5. Distribution Readiness — 15
6. Validation Evidence — 10
7. Team & Stage Fit — 5
8. Cashflow Awareness — 5

Return:

1. Backend score out of 100
2. Frontend readiness stage

3. Short friendly summary
4. Top 2 strengths
5. Top 2 assumptions to validate
6. Suggested MVP experiment
7. 7-day action plan
8. Improved one-line pitch
9. One founder reflection question

Tone should be founder-friendly, direct, and practical.

Do not say the startup will succeed or fail.

13. Frontend Result Copy Examples

Example 1: Idea Clarity

Result

Your MVP Readiness Stage: Idea Clarity

Summary

You have an interesting direction, but the problem and customer segment need sharper definition before building.

Strengths

- You have identified a broad problem area.
- The idea can be tested without heavy technology investment.

Assumptions to Validate

- Who feels this problem most urgently?
- Whether the user and payer are the same person.

Suggested MVP Experiment

Speak to 10 target users and document their current workaround, pain intensity, and willingness to try a solution.

7-Day Plan

Day 1: Define one target user segment

Day 2–3: Talk to 10 users

Day 4: Identify repeated pain points

Day 5: Draft one simple offer

Day 6: Test the offer with 5 users

Day 7: Decide whether to build, pivot, or pause

Improved Pitch

"We help [specific user] solve [specific pain] through [simple solution]."

Reflection Question

What evidence would convince you not to build this?

Example 2: MVP Candidate

Result

Your MVP Readiness Stage: MVP Candidate

Summary

You have reasonable problem clarity and can move into a small MVP experiment. Avoid building a full product yet. Focus on testing willingness to pay and repeat usage.

Strengths

- Clear first customer segment.
- MVP can be tested quickly.

Assumptions to Validate

- Whether customers will pay after the first trial.
- Whether your first channel can generate repeatable leads.

Suggested MVP Experiment

Run a 7-day concierge MVP with 10 target users. Deliver the service manually, collect feedback, and test payment.

7-Day Plan

Day 1: List first 10 users
Day 2: Send founder-led outreach
Day 3: Run 3 discovery calls
Day 4: Deliver manual MVP to 2 users
Day 5: Ask for payment or commitment
Day 6: Capture objections
Day 7: Decide what to build next

Improved Pitch

"We help [specific customer] achieve [outcome] without [current pain]."

Reflection Question

What part of your product can remain manual until customers prove they care?

Example 3: Pilot Ready

Result

Your MVP Readiness Stage: Pilot Ready

Summary

You have enough clarity to run a controlled pilot. Your focus should now shift from building features to measuring adoption, payment, and repeat usage.

Strengths

- Strong problem and customer clarity.
- Early evidence suggests users may adopt the solution.

Assumptions to Validate

- Whether users return without founder pushing.
- Whether the payer sees enough value to continue.

Suggested MVP Experiment

Run a 2-week pilot with 3–5 customers. Define success metrics before starting.

7-Day Plan

Day 1: Define pilot success metrics

Day 2: Confirm pilot users

Day 3: Set up MVP workflow

Day 4–6: Run pilot and capture usage

Day 7: Review adoption, payment, and objections

Improved Pitch

"We help [customer segment] improve [business/personal outcome] by [solution], measured through [success metric]."

Reflection Question

If this pilot works, what is the next repeatable channel to find similar customers?

14. Frontend Design Recommendations

Overall Style

- Mobile-first
- Clean and minimal
- One question per screen
- Progress bar visible
- Friendly microcopy
- Use icons, not heavy text
- Avoid dense Lean Canvas layout in mobile flow
- Use cards and chips for options

Recommended Visual Language

- Warm but professional
- Founder workshop feel
- Use simple line icons
- Use progress indicators
- Use soft colors for result stages
- Avoid red warning-heavy UI

Recommended Color Coding

Use stages as positive progression:

- Idea Clarity — Grey / Blue
- Discovery Ready — Blue
- MVP Candidate — Purple
- Pilot Ready — Green
- Revenue Ready — Gold

Avoid red unless there is a serious missing field.

15. Screen-Level Frontend Details

Progress Bar

Show:

Step 1 of 6: Problem

This reduces anxiety.

Autosave

Responses should autosave if possible.

Input Length

Use text boxes with suggested length:

- Short answer: 1–2 lines
- Detailed answer: 3–5 lines

Avoid long forms.

AI Probe UX

After each main answer, show AI probe as a friendly coach card:

Quick follow-up from AI Coach

Example: “Can you name one real person or organization facing this problem today?”

User can answer or skip.

Button options:

- Answer
- Skip for now

Skipping should not block completion.

Results UX

Results should not look like a report card.

Avoid:

Score: 42/100

Prefer:

You are currently at: Discovery Ready

Then smaller:

Backend Clarity Score: 42/100

Optional: hide numeric score behind “View detailed breakdown.”

16. Pitch Deck Upload — Optional Later

For workshop MVP, pitch deck upload can be optional or postponed.

If included, frontend copy:

Want a deeper assessment? Upload your pitch deck.

Helper text:

The AI will use your deck to understand your problem, product, market, traction, and GTM plan. Avoid uploading confidential information unless you are comfortable using it for AI-assisted analysis.

For first version, this can be disabled to keep the workshop fast.

Recommended approach:

- Workshop version: no deck upload
 - Post-workshop version: deck upload enabled
-

17. Data Capture

Capture these fields:

- Founder name
 - Startup name
 - Phone/email
 - Sector
 - Stage
 - Team size
 - Product type
 - Business model
 - Responses
 - AI probes
 - Probe responses
 - Backend score
 - Readiness stage
 - Recommendations
 - Timestamp
 - Consent for follow-up
-

18. Consent & Disclaimer

Show before starting:

By continuing, you agree that your responses will be used to generate an AI-assisted MVP readiness snapshot. This is a directional learning tool, not investment, legal, financial, or business guarantee advice. Please avoid sharing confidential information.

Checkbox:

I understand and want to continue.

19. Workshop Big-Screen Flow

During the workshop:

1. Show QR code.
2. Say: "This is not an exam. This is a founder thinking tool."
3. Ask participants to complete the snapshot.
4. Give them 5 minutes.
5. Pick one volunteer.
6. Walk through their answer live.
7. Show how AI asks sharper questions.
8. Show how better answers improve readiness.
9. Explain that clarity and evidence matter more than high score.
10. Ask everyone to write one action for the next 7 days.

Important presenter line:

The goal is not to get a high score. The goal is to find the riskiest assumption before the market finds it for you.

20. MVP Build Scope for Vishal / Team

Must Build for Workshop

- QR landing page
- Founder/startup basics
- 6-question guided flow
- 1 AI probe per section
- AI result generation
- Readiness stage
- Top strengths
- Top assumptions
- MVP experiment
- 7-day action plan
- Admin view of submissions
- Export responses as CSV

Nice to Have

- Email result to founder
- Download PDF report
- Anonymous live leaderboard by readiness stage
- Sector-wise weak areas
- Pitch deck upload

- Follow-up diagnostic link

Avoid in V1

- Login system
 - Payment
 - Complex founder dashboard
 - Investor matching
 - Multi-user collaboration
 - Long Lean Canvas form
 - Heavy pitch deck parser
 - Complex analytics
-

21. Admin Dashboard

For workshop organizers / presenter, admin should show:

- Total scans
- Total completed snapshots
- Sector distribution
- Startup stage distribution
- Average readiness stage
- Common weak areas
- Common assumptions to validate
- List of founders requesting follow-up

This can help in the workshop closing:

"Most founders in this room are strong on ideas, but the common weak area is payer clarity / first 10 users / MVP focus."

22. Success Metrics for This Application

During workshop:

- Number of QR scans
- Completion rate
- Average time to complete
- Number of AI probes answered
- Number of founders receiving result
- Number of founders opting for follow-up
- Most common readiness stage
- Most common weak area

Qualitative success:

Participants should say:

“This helped me realize what I had not thought through.”

23. Final Product Positioning

The MVP Readiness Snapshot is not a judging tool.

It is a founder thinking tool.

It helps founders pressure-test their idea before they spend too much time, money, and emotional energy building the wrong thing.

Final Line

Build proof before product.
